

ANVI GLOBAL

REAL ASSETS. DIGITAL TRUST. GLOBAL LIQUIDITY.

Integrating AI powered DeFI into Global Trade

Our Vision

To transform how the world trades and finances commodities — enabling transparent, liquid, and digitally-native markets for energy transition and critical minerals.

Our Mission

To democratise access to commodity and transition finance by tokenising real assets and embedding DeFi principles into global trade flows.

The Opportunity

The global energy and technology transition is reshaping commodity markets:

- 1+ trillion trade finance gap in emerging markets
- \$20+ trillion annual commodity trade flows redefined by decarbonisation and digitalization
- Tokenisation market: \$16T+ by 2030
- Demand for critical minerals (lithium, cobalt, nickel, rare earths) accelerating due to EVs, batteries, and AI infrastructure
- Hydrogen, LNG, and sustainable fuels becoming essential bridge commodities
- Illiquid, opaque, exclusionary commodity flows
- Slow, paper-heavy financing processes

ANVI GLOBAL stands at this convergence - unlocking capital and commodity flows through trading, structured finance, and digital tokenisation.

Our Goals

- Create and build a leading alternative credit business in the commodities and energy markets globally
- Tokenize commodities markets. Disintermediate corporate lending business
- Provide capital to bridge liquidating gap
- Responsibly make investors a consistent low volatility return which is scalable and long term
- Create new business lines focussed on real economy
- Digitise and disintermediate the operations due diligence and collateral management

Our Solution

- Tokenise reserves, inventories, receivables, carbon credits
- DeFi liquidity pools for pre-export & inventory finance
- AI-powered credit scoring and compliance automation
- Transparent on-chain settlement and reporting

How it Works

- Producer tokenises reserves/inventories
- Tokens placed into DeFi liquidity pools
- Structured financing advanced to producer
- Commodity shipped; revenues flow into escrow
- Smart contracts repay investors + yield

Differentiation

- Bridge between physical commodities & blockchain finance
- Access to illiquid EM flows + global liquidity
- Dual yield: trading margins + DeFi yields
- Immutable, transparent on-chain trust layer

Investor Proposition

- Target 12–15% yields
- Asset-backed security with escrow & blockchain verification
- Exposure to energy transition commodities
- ESG-aligned, CBAM-compliant financing

Why Now

- Energy transition driving critical mineral demand
- DeFi reaching institutional adoption
- Tokenisation forecast \$16T+ by 2030
- Policy shifts toward transparency & ESG
